EDUCATION

Virginia Tech, College of Engineering | College of Science
BS Computer Science | BS Applied Discrete Mathematics | Minor: Cybersecurity
Blacksburg, VA
Aug 2021 - May 2025

Virginia Tech, College of Engineering
Master of Engineering, Computer Science and Applications | Concentration: Cybersecurity
Blacksburg, VA
Aug 2024 - May 2026
GPA: 3.9/4.0

PROFESSIONAL EXPERIENCE

Peraton
Software Engineer, Senior Associate
Herndon, VA
Jul 2026 – Present

- Developed and debugged new and existing features on mission critical simulation software for U.S. Navy readiness
- Gained hands-on experience working with a large-scale C++ codebase built and managed with Maven, including version control workflows, code reviews, and agile practices in a mission critical software environment

Peraton
Data Science Engineer Intern
Blacksburg, VA
Jun 2025 – Aug 2025

- Researched and implemented techniques for hardening an MCP server for secure AI agent execution across domains
- Designed agentic AI workflows for different tasks, e.g. scanning cloud-native codebases for compliance / controls
- Integrated AI-driven telemetry analysis with monitoring platforms to automate anomaly detection across K8s clusters

Hume Center for National Security and Technology at Virginia Tech
HIRF Research Fellow
Blacksburg, VA
Aug 2024 - May 2025

- Research project with industry partner L3Harris focused on software reverse engineering and vulnerability detection
- Investigated potential vulnerabilities in messaging apps on iPhones using reverse engineering techniques
- Leveraged tools such as Ghidra, x64dbg, and many iOS-related tools to effectively analyze iOS binaries

Hume Center for National Security and Technology at Virginia Tech
Intern
Arlington, VA
May 2024 - July 2024

- Explored, tested, and evaluated various applications of quantum optimization and quantum random numbers
- Found advantages of quantum optimization technology in multiple machine learning algorithms using PyTorch
- Tested and analyzed effectiveness of quantum random numbers in different cryptosystems

Hume Center for National Security and Technology at Virginia Tech
Student Researcher (Software Team)
Blacksburg, VA
Jan 2024 - May 2024

- Researcher on project Defend the Republic with the goal of developing a lighter-than-air automated drone
- Automated and tested our team's drone using OpenCV in C++ and Python for computer vision and ROS2

PROJECTS

GMAP (Agentic AI Penetration Testing Tool)
Capstone Project
Jan 2026 – May 2026

- Worked on a semester long team with the goal of building an autonomous penetration testing agent that progresses through discovery, reconnaissance, vulnerability detection, review, exploitation, and documentation phases, dynamically selecting and orchestrating tools at each stage based on live findings
- The agent was able to pinpoint exact CVEs for over 80% of the tested applications that had known vulnerabilities

SKILLS

Languages, Frameworks, etc: Python, Java, C, C++, Linux/Unix, PyTorch, TensorFlow, SQL, LangChain, Docker, Kubernetes, Helm, Terraform, AWS, Ghidra, Bash, HTML, CSS, JavaScript, MongoDB, React, Express.js, Node.js
